The template was developed for use by member councils of the Barwon South West Resource Recovery Group and may only be used for the purpose intended.

If you would like to view this template or request permission for use, please contact the Barwon South West Waste and Resource Recovery Group on phone (03) 5223 2622 or email <a href="mailto:info@bswwrrq.vic.gov.au">info@bswwrrq.vic.gov.au</a>.

# Opportunity to provide feedback

Council welcomes comment from all interested parties on this Draft Resource Recovery and Waste Management Strategy 2018-2028. The Strategy is available to download from the Corangamite Shire website (www.corangamite.vic.gov.au) or in hardcopy at the Corangamite Shire Civic Centre or Corangamite Libraries.

There are several ways to provide comment on the Draft Resource Recovery and Waste Management Strategy 2018-2028:

1. By completing the feedback form attached to the Strategy and returning it to:

Chief Executive Officer
Draft Resource Recovery and Waste Management Strategy
Corangamite Shire
PO Box 84
CAMPERDOWN Vic 3260

- 2. By attending one of three community drop in sessions to be held during the comment period.
- 3. Through online submission at the Corangamite Shire website www.corangamite.vic.gov.au
- 4. By arranging a telephone or in-person appointment. Please contact Anthony Dufty, Coordinator Landfill and Waste Management on 5593 7100 to arrange an appointment.

Public comment on the Draft Resource Recovery and Waste Management Strategy 2018-2028 closes at **5pm** on **Sunday 10 December 2018**.

# **Feedback form**

What do you like about the Draft Resource Recovery and Waste Management Strategy and why?
2. What don't you like about the Draft Resource Recovery and Waste Management Strategy? What would you change?
3. Do you feel that the strategy accurately reflects the community's needs and priorities?
4. What actions do you think Council should take to achieve those goals?
If you would like to receive a copy of the final Resource Recovery and Waste Management Strategy 2018 – 2028, please include your name and postal address below:

Corangamite Shire Council's Resource Recovery and Waste Management Strategy (the strategy) outlines sustainable waste management and resource recovery initiatives for the next 10 years.

# Introduction

## Vision and scope of the strategy

This strategy builds on past waste and recycling achievements in the Shire and sets out resource recovery and waste management strategies over the next 10 years (2018-2028).

The strategy will provide Council with the direction needed to achieve Corangamite's waste vision and objectives:

- to further reduce waste generation
- maximise recycling
- provide efficient and cost-effective services to the Corangamite community.

These align with regional waste and resource recovery goals set by the Barwon South West Waste and Resource Recovery Group, of which Corangamite Shire Council is a member.

#### VISION

To further reduce waste generation, maximise recycling and provide efficient and costeffective waste services to the Corangamite community.

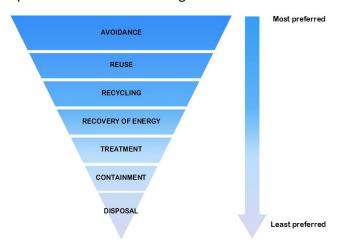

## Council's role in waste management

Corangamite Shire Council acts within a wider waste management planning framework as shown in Figure 1.

The underlying principle of waste management policies in Australia is the waste management hierarchy which is included in Victorian environmental legislation. The hierarchy establishes the following order of preference for waste management:

Under the *Environment Protection Act 1970*, Councils are required to perform waste management functions that are consistent with Regional Waste and Resource Recovery Implementation Plans.

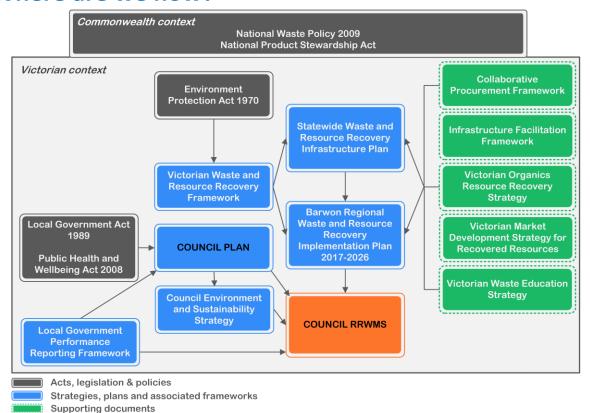

The Local Government Act 1989 (and Public Health and Wellbeing Act 2008) also outlines Council's responsibility for maintaining the municipality in a clean and sanitary condition, planning for and providing community services and infrastructure, ensuring that services are delivered in accordance with best value principles, and striving for continuous improvement in service delivery.

Council is committed to meeting its waste management responsibilities and has considered a range of overarching policies, plans, regulations and the waste management hierarchy in the development of this strategy.

Figure 1 Waste management planning framework

# Where are we now?

#### **Council services**

Council is committed to providing effective and cost-efficient waste and recycling services and infrastructure to the Corangamite community.

#### **Kerbside collections**

Council provides a three-bin kerbside collection service to more than 5,300 properties including residential, community and commercial properties. This is outlined in Table 1.

The collection area currently covers the townships of Camperdown, Cobden, Derrinallum, Glenormiston, Gnotuk, Lismore, Noorat, Port Campbell, Skipton, Simpson, Terang and Timboon.

#### Waste in public spaces

There are approximately 308 public place waste and recycling bins located across the Shire to manage litter within public spaces such as lake reserves, caravan parks, pools

etc. Around 228 of these are waste bins while around 40 are recycling bins.

Key litter hotspots are along highways and tourist areas.

#### **Street sweepings**

Street sweepings are carried out by in-house staff on a daily basis.

#### Waste from local events

Council offers event organisers the free option to borrow a Waste Wise Events trailer to provide appropriate waste and recycling infrastructure at public events. This trailer includes 12 waste bins, 12 recycling bins and bin caps.

Council provides waste and recycling education via the Council website, kerbside collection calendar and A-Z waste and recycling guide.

Educational programs are provided on an adhoc basis and may involve presentations to schools and community groups.

## Littering and illegal dumping

Littering and illegal dumping is generally managed in accordance with local laws by Council's parks and gardens team.

### **Education and engagement**

Table 1 Summary of kerbside collection services 2017

Service	Bin size	E	Bin design	No. of properties serviced*	Collection frequency
Waste	120 L		Lid: red Body: dark green	5,300	Weekly
Recycling	240 L		Lid: yellow Body: dark green	5,300	Fortnightly
Food organics and garden organics (FOGO)	240 L		Lid: Lime-green Body: dark green	5,300	Fortnightly from Jan to Sep Weekly from Oct to Dec

## Recycling and waste disposal facilities

Council operates waste and recycling facilities at:

- Corangamite resource recovery centre/transfer station (RRC/TS)
- Derrinallum RRC/TS
- Port Campbell RRC/TS
- Simpson RRC/TS
- Skipton RRC/TS
- Timboon RRC/TS.

Materials that can be dropped off free of charge include:

- car batteries
- e-waste
- drumMUSTER agricultural chemical containers
- gas bottles
- steel
- waste motor oil.

Other materials (such as commingled recyclables, dead animals, garden waste, mattresses, silage wrap and tyres) are accepted for a fee. However, free garden waste disposal is offered annually over a two-week period (in late November to early December) to help residents prepare for the fire season.

No sites accept asbestos, liquid waste, volatile, explosive or flammable materials and medical/infected or prescribed wastes. The infrastructure at each RRC/TS is aging and needs to be upgraded to bring them up to

best practice and to allow for future diversion of additional materials (such as e-waste). Some upgrades may include additional covered areas, bunding and hardstand areas.

Timboon RRC/TS is also outgrowing its current site and may need to be relocated in the near future to ensure the facility is able to meet the needs of the community in the long term particularly during peak tourist season.

Corangamite Regional Landfill is licensed to accept putrescible and industrial solid waste. The landfill is considered to be of state significance to Victoria's waste infrastructure network and is also one of Council's most expensive assets.

Co-located at the landfill are the Corangamite RRC/TS and composting facility which has a processing capacity of up to 10,000 tonnes/year of food and garden waste.

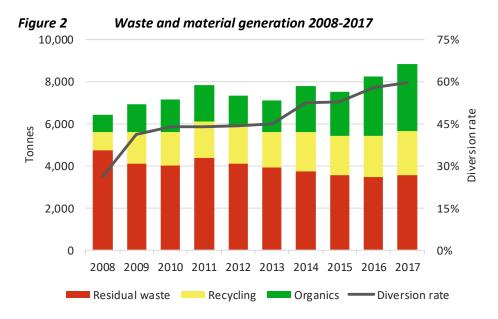

Council will continue to undertake appropriate measures to ensure the landfill is managed in accordance with environmental regulations.

There are no 'Detox your Home' services for the disposal of household hazardous waste in the Shire. Council will continue to promote the use of 'Detox your Home' facilities in Ballarat, Colac and Warrnambool.

## Waste generation and material recovery

The total quantity of municipal waste generated between 2008-2017 is shown in Figure 2. Over the last 10 years, there has been a slight decline in the quantity of residual waste while organics and recycling have increased. The main factor that has influenced this waste trend has been the introduction of the three-bin system in 2008.

In 2016-17 an estimated 8,800 tonnes of waste were generated in the Shire. Most of this was from kerbside and public place bin collections (around 60%), while the remaining waste was from resource recovery centres/transfer stations (RRC/TS) (around 40%).

The average household in Corangamite in 2017 generated around:

- 355 kg of residual waste
- 262 kg of recyclables
- 367 kg of organic waste.

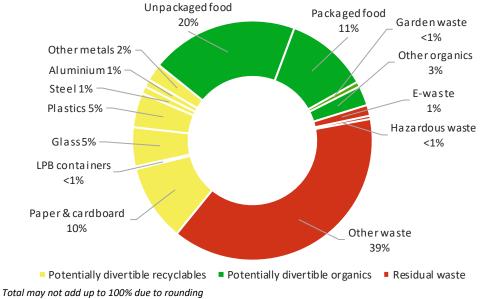

Council conducted a kerbside bin audit in 2018 to gauge how well kerbside bins are used by Corangamite residents. The results for each bin have been summarised in the figures overleaf.

In 2017, around 60% of all waste from kerbside collections and RRC/TS was diverted from landfill.

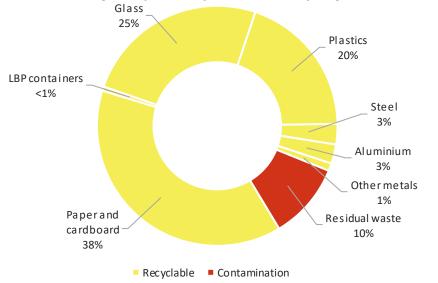

Figure 3 Average composition of materials in residual waste bins, 2017 and 2018

On average, residual waste bins have a small proportion (by weight) of garden waste. This indicates that most residents have a good understanding that garden waste should be placed in the FOGO bin. However, large proportions of food waste (around 31% by weight) and recyclables (around 25%) which could be diverted continue to be placed in residual waste bins and sent to landfill.

Figure 4 Average composition of materials in recycling bins, 2017 and 2018

Total may not add up to 100% due to rounding

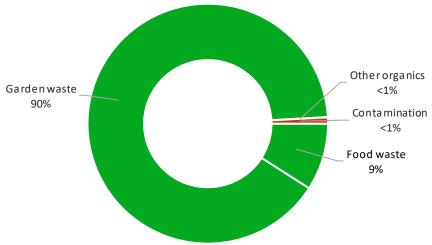

Recycling bin audit results in Figure 4 show that paper and cardboard make up the largest proportion by weight in recycling bins (average of around 38%). The average contamination rate is around 10%, however in some townships this can be as high as 15%. The main contaminants are bagged recyclables, food waste, non-recyclable rigid plastics and plastic film.

FOGO bins comprise of mainly garden waste and have low contamination rates of less than 1% as shown in Figure 5. The average proportion of food waste in FOGO bins is around 9%. However, this average is skewed by two townships that achieve higher food waste diversion through the use of

kitchen caddies. Most townships do not have kitchen caddies and have seen little improvement in diversion since 2014 with less than 1% by weight of food waste in FOGO bins.

Figure 5 Average composition of materials in FOGO bins, 2017 and 2018

Total may not add up to 100% due to rounding

Kerbside waste bins have large amounts of food waste and recyclables.

Recycling bins have high contamination rates.

The proportion of food waste in FOGO bins varies but is generally low.

Figure 6 shows the quantity of waste received at each RRC/TS in the Shire between 2013 and 2017. Waste tonnages at most of the RRC/TS appear to be declining, except at Port Campbell RRC/TS which has slightly increased over the last four years.

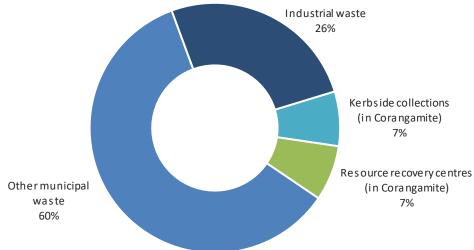

Figure 6 Waste received at RRC/TS in the Shire, 2013-2017 1,400 1,200 1,000 Tonnes 800 600 400 200 0 Corangamite Derrinallum Port Campbell Simpson Skipton Timboon RRC/TS RRC/TS RRC/TS RRC/TS RRC/TS RRC/TS **■** 2013 **■** 2014 **■** 2015 **■** 2016 **■** 2017

In 2017, around 26,700 tonnes of waste were deposited at Corangamite Regional Landfill. Figure 7 shows the proportion of waste received by source. Most of the waste received at the landfill is municipal waste which comes from outside of the Shire. Industrial waste makes up around 26% of

the total incoming waste; this is also from outside the Shire. Only around 14% of the total waste landfilled is from within the Shire.

Figure 7 Waste at Corangamite Regional Landfill by source, 2017

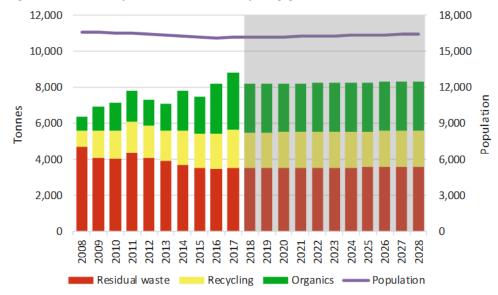

Future population growth in the Shire is predicted to be low compared to other councils in the Barwon South West region. By 2028 the population is forecasted to be around 16,400 which is close to a 2% increase.

By 2028 around 8,300 tonnes of municipal waste could be generated.

At current growth trends, the total municipal waste generated in Corangamite is estimated to increase from 8,200 tonnes in 2018 to around 8,300 tonnes by 2028.

Figure 8 Projected waste and recycling generation, 2008-2028

Shaded area refers to the projection period.

Corangamite Regional Landfill has capacity to continue landfilling for at least 50 years. However, this could potentially be shortened or extended depending on future landfilling rates.

Corangamite Regional Landfill has enough landfill airspace capacity to continue landfilling for at least 50 years.

#### **Performance and achievements**

Some of Corangamite's past waste and recycling achievements are highlighted below.

Around 64% of waste collected from kerbside bins was diverted from landfill in 2017 (this is a 73% increase compared to 2008 levels)

Increased organics recovery from kerbside by 25% in 2017 compared to 2016 levels

Introduced a fortnightly kerbside food and garden waste bin collection service (with weekly collections between October and December)

Completed a kitchen caddy and compostable liner trial in 2017

Introduced free garden waste drop-off at all resource recovery centres/transfer stations for two weeks in preparation for the fire season

Increased the Shire's organics processing capacity to 10,000 tonnes per year

Closed other landfills to concentrate all disposal activities at the Corangamite Regional Landfill (an engineered, licensed regional facility recognised as a site of state significance)

Achieved cost savings from the rationalisation of waste bins and improved collection at Council offices

According to the 2017 Local Government Community Satisfaction survey, waste management received an index score of 69 out of 100. Compared to large rural councils in Victoria (which scored an average of 67 out of 100), Corangamite Shire Council is performing better than the average.

Council conducted an online community satisfaction survey on Council managed waste services, facilities education programs and other waste issues. Key findings have been summarised below.

- The main methods of waste disposal used by residents are Council's kerbside waste collection service (66%) and transfer stations or landfill (24%).
- All respondents believe recycling bins are the most important kerbside collection service. Most (94%) indicated they are very or extremely satisfied with the service.
- Most respondents consider the organics bin collection service to be excellent and efficient (particularly the weekly services offered in spring/summer), although the service could be extended.
- Most respondents thought that waste facilities were important (62%) and they were either
  extremely or very satisfied with the service (64%). Suggested improvements were related to
  garden waste, mattresses and recovery opportunities.
- The community would like more education on what can and cannot be recycled, what happens
  to Corangamite's recycling and organics, how to dispose of hazardous materials, and how to
  recycle more things.
- The most common waste and recycling issues were having to deal with unnecessary packaging, disposal costs at transfer stations and correct bin use.
- The types of materials residents find difficult to manage or dispose of are plastics, paint cans, hard waste, batteries and polystyrene.

# **Objectives for the future**

Corangamite Shire Council has established the following waste objectives for the next 10 years:

- to reduce waste generation
- increase resource recovery to extend the lifecycle of materials
- provide waste services and infrastructure that meet the needs of the community.

These objectives align with other council and regional plans including the Barwon South West Waste and Resource Recovery Implementation Plan 2017-2026. As Council operate a regional landfill it is important to recognise that these customers will also need to be included in the design and delivery of education programs to ensure the vision and goals of this strategy can be achieved.

Table 2 Goals and objectives

Key area	Barwon South West WRRG regional objectives	Council objectives
Behaviour change	Achieve behaviour change that reduces waste generation and increases resource recovery	Reduce waste generation
Resource recovery and innovation	Encourage innovative and cost-effective ways to increase resource recovery	Increase resource recovery to extend the lifecycle of materials
Market development	Identify and establish industry relationships to build market opportunities to maximise resource recovery	
Collaborative procurement	Facilitate the aggregation of services through joint procurement to maximise resource recovery and cost effectiveness	
Strategic planning	Plan for future waste and resource recovery infrastructure and service needs for the region	Provide waste services and infrastructure that meet the needs of the community

Council will also continue to work towards the following Environment and Sustainability Strategy 2014-2019 waste targets:

- by 2019 reduce kerbside waste per household to landfill by 10% (based on 2013 levels)
- by 2019 increase kerbside recovery of organics and recyclables by 10% (based on 2013 levels).

# What do we do to achieve this?

The Shire is expected to face a number of waste and recycling challenges over the next 10 years which could affect waste management in Corangamite. Key challenges include:

- minimising contamination rates in recycling bins to improve the quality of recyclables for recovery
- increasing food waste diversion from households to reduce greenhouse gas emissions from landfill disposal
- managing litter in tourist areas during peak seasons
- ensuring waste facilities have sufficient material capacity (e.g. e-waste capacity in preparation for the Victorian e-waste ban from landfill)
- improving waste facilities to meet best practice and ensure the level of service to the community is maintained
- managing Corangamite Regional Landfill to ensure future financial viability
- pressures to reduce waste service costs to the community
- possible changes to regulatory requirements around closed landfills and other waste facilities where applicable.

Council has also identified a number of opportunities for improving waste management and resource recovery in the areas of waste avoidance, community education and awareness, collection and recovery, waste and recycling infrastructure, disaster waste management, data recording and monitoring systems and resourcing. To work towards achieving Corangamite's waste vision and objectives, Council has developed a range of strategies that focus on overcoming such challenges as well as taking advantage of these opportunities.

14 key strategies have been developed to work towards achieving Corangamite's waste vision and objectives.

Table 3 summarises the key strategies for achieving Corangamite's waste management objectives over the next 10 years.

Table 3 Strategies to achieve our objectives

Objectives		How we will achieve these outcomes?
1. Reduce waste	1.1	Support and promote waste avoidance and minimisation programs
generation.	1.2	Explore innovative and cost-effective options to reduce waste generation (including food waste)
	1.3	Identify opportunities to avoid and minimise waste from Council operations
	1.4	Plan and implement effective measures to minimise and manage disaster waste as needed
2. Increase resource recovery	2.1	Provide enhanced community education to increase awareness and encourage behaviour change around waste and recycling
to extend the lifecycle of	2.2	Advocate on waste and recycling issues and support local and regional programs that promote resource recovery
materials.	2.3	Explore local and regional opportunities to maximise resource recovery and extend the lifecycle of materials
	2.4	Investigate options for improving resource recovery at waste facilities
3. Provide waste services and	3.1	Work with other councils and organisations to identify opportunities for delivering more efficient and cost-effective services
infrastructure that meet the needs of	3.2	Investigate options to increase community service levels and support greater resource recovery from households and businesses
the community.	3.3	Review waste and resource recovery infrastructure and services to minimise waste generated in public spaces
	3.4	Explore innovative systems to improve waste and recycling services and the robustness of data management
	3.5	Review the Landfill and RRC/TS network to ensure usage and accessibility meets future community needs
	3.6	Upgrade waste facilities as needed to improve operating efficiency and ensure facilities are in accordance with best practice standards and regulations

A detailed implementation plan has been developed for these strategies and is provided in the Appendix. Actions in the implementation plan have been prioritised and will be implemented in the short-term (0-2 years), medium-term (2-5 years) or long-term (5-10 years) timescale.

# Next steps to implement the strategy

#### Consultation

The strategy will be made available to the community for public feedback. Comments will be reviewed and used to inform finalisation of the strategy.

## **Implementation**

Upon finalisation of the strategy, Council will work to implement the strategy. The implementation plan will be reviewed and updated annually to ensure continual improvement in waste management services within the Shire. The review will involve an assessment of Corangamite's performance as well as the approach to incorporate any new actions needed to achieve the waste objectives and align to the community's needs.

Council will also continue to measure Corangamite's kerbside waste service performance in accordance with mandatory reporting to the Victorian Government.

Other non-mandatory performance indicators will also be monitored such as the kerbside waste generated per household (kg per household per year) and total municipal waste diversion rate in the Shire (%).

Council will review the resource recovery and waste management implementation plan annually.

# **Glossary**

Term	Definition
Avoidance	Practices which prevent the generation of waste
Commercial and industrial (C&I) waste	Solid inert waste generated from trade, commercial and industrial activities including the government sector such as waste from offices, manufacturing, factories, schools, universities, state and government operations and small to medium enterprises, etc.
Comingled recyclables	Materials combined generally for the purposes of collection, mainly through municipal collection services. Includes plastic bottles, other plastics, paper, glass and metal containers. Comingled recyclable materials require sorting after collection before they can be reprocessed.
Containment	Long-term storage of waste requiring a high degree of control to prevent contamination
Disposal	Deposit of materials, typically into landfill
Food organics and	Combined food and garden waste generally for the purposes of collection,
garden organics	mainly through municipal collection services. Food waste includes meat,
(FOGO)	fruit, vegetable scraps, etc. and does not include liquid waste. Garden waste
	includes glass clippings, tree prunings and leaves, etc.
Municipal solid	Solid waste generated from municipal and residential activities, including
waste (MSW)	waste collected by, or on behalf of, a municipal council
Recovery of energy	Extraction of calorific value to create usable energy
Recycling	Using valuable components of waste in other processes
Residual waste	Also known as garbage or general waste, it is material that remains after any source separation of recyclable materials or food and garden organics
Resource recovery	A facility established to receive and/or recover reusable and recyclable
centre (RRC)	materials that would otherwise be destined for disposal. Can be combined
	with a transfer station and may include a resale centre.
Reuse	Direct reuse of materials without additional processing
Transfer station	A facility allowing the drop-off and consolidation of garbage and a wide
	range of recyclable materials. Can be combined with a resource recovery
	centre and may include a resale centre. Does not undertake processing activities.
Treatment	Reduce volume or change composition to reduce hazard or nuisance

# **Appendix: Implementation plan**

	Strategy	Action	Priority
1.	Reduce waste generation		
1.1.	Support and promote waste avoidance and minimisation	1.1.1. Support and participate in regional and state waste avoidance and minimisation programs (such as Barwon South West WRRG's 'Aspire' program and Sustainability Victoria's Love Food Hate Waste)	Н
	programs	1.1.2. Support and promote community led initiatives on waste avoidance and minimisation by establishing community networks (such as 'War on Waste' groups) and facilitating buy/swap/sell events as necessary	Н
1.2.	Explore innovative and cost- effective options to reduce waste generation (including food waste)	1.2.1. Explore options to better promote home composting to further reduce food waste sent to landfill	M
1.3.	Identify opportunities to avoid and minimise waste from Council operations	1.3.1. Identify opportunities for Council to avoid and minimise waste in its operations, including increasing green purchasing, trialling a paperless office system, recycling food waste from office kitchens	Н
1.4.	Plan and implement effective	1.4.1. Continue to offer free garden waste drop-off in preparation for the fire season	Н
	measures to minimise and manage disaster waste as needed	1.4.2. Ensure appropriate measures are in place for disaster waste management	Н
2.	Increase resource recovery to e	xtend the lifecycle of materials	
2.1.	Provide enhanced community education to increase awareness and encourage	2.1.1. Improve the promotion of existing waste and recycling services and programs and explore more effective avenues for the delivery of educational materials to the community (e.g. phone 'apps', waste tours)	Н
	behaviour change around	2.1.2. Increase community awareness about what happens to Corangamite's waste, recycling and organics	Н
	waste and recycling	2.1.3. Participate in the Barwon South West WRRG education network (once established)	М
		2.1.4. Re-develop education campaigns and update as necessary to enable behaviour change around the main waste issues (e.g. contamination, correct bin use and food waste diversion) and inform the community on emerging issues (e.g. e-waste ban, single-use plastic bag ban)	Н
		2.1.5. Encourage and support school participation in the ResourceSmart program	Н
		2.1.6. Identify opportunities and participate in regional and state education and engagement programs as they become available (including kerbside audit programs)	Н
		2.1.7. Continue to look for joint procurement and educational opportunities with adjoining municipalities	Н
		2.1.8. Promote the community's waste and recycling performance to encourage improved waste diversion in homes	M

			эпіке
	Strategy	Action	Priority
		2.1.9. Expand education programs to businesses to encourage less waste generation and recycling contamination and increased food waste diversion (e.g. by taking food waste to Corangamite Regional Landfill for composting)	Н
2.2.	Advocate on waste and	2.2.1. Advocate via Council groups and government organisations (e.g. Barwon South West WRRG, Municipal	M
	recycling issues and support local and regional programs that promote resource recovery	Association of Victoria, Sustainability Victoria) on issues such as product stewardship programs for hard to recycle materials, plastic pollution, container deposit scheme, additional resourcing, etc.	
2.3.	Explore local and regional	2.3.1. Support regional programs in improving resource recovery from businesses	М
	opportunities to maximise	2.3.2. Ensure sufficient financial and staffing resources are available to match the waste services provided	Н
	resource recovery and extend the lifecycle of materials	2.3.3. Seek joint resources where available and opportunities to collaborate with Barwon South West WRRG and others where possible	L
2.4.	Investigate options for improving resource recovery at waste facilities	2.4.1. Develop a capital investment plan based on the RRC/TS network assessment and implement facility upgrades to meet future demands and best practice standards	Н
		2.4.2. Ensure resource recovery infrastructure in place at RRC/TS encourages recycling of cardboard, comingled recyclables and e-waste from businesses	Н
		2.4.3. Investigate options to support community op shops (or similar) to recover items from RRC/TSs and Corangamite Regional Landfill	М
3.	Provide waste infrastructure a	and services that meet the needs of the community	
3.1.	Work with other councils and organisations to identify	3.1.1. Identify and participate in collaborative procurement opportunities with other councils for kerbside collections where it is mutually beneficial	Н
	opportunities for delivering more efficient and cost- effective services	3.1.2. Explore collaborative arrangements with Parks Victoria to increase visitor preparedness for the 'carry in, carry out' policy at national parks in the Shire	L
3.2.	Investigate options to increase community service	3.2.1. Assess kerbside bin life and consider replacement options as part of the next kerbside contract due approximately around 2020.	L
	levels and support greater	3.2.2. Investigate the cost-benefit of expanding the kerbside collection service (including on-route collections)	L
	resource recovery from households and businesses	3.2.3. Investigate and implement alternative bin configurations and collection frequencies that maximise resource recovery where it meets community needs in the next kerbside collection contract (including exploring 360 L recycling bins to assist in diversion)	L
		3.2.4. Subject to the outcomes of the behaviour change program, expand the kitchen caddy and compost liner program to all properties that receive a kerbside collection service to encourage greater food waste diversion	L

			SHIKE
	Strategy	Action	Priority
		3.2.5. Provide annual compostable liners to each kerbside resident and support businesses to stock replacements if the community require more	L
		3.2.6. Consider trialling fortnightly waste and weekly FOGO collection services once diversion of food waste has improved	M
		3.2.7. Explore the option of returning compost products (if processed to a safe standard) to the community to assist with education campaigns around organics diversion and recovery	M
		3.2.8. Continue to monitor for additional resource recovery opportunities as they become available (e.g. plastics, nappies, etc.)	M
		3.2.9. Explore options for additional drop-off locations for household batteries	Н
		3.2.10. Work with local businesses (particularly in the food manufacturing and hospitality sectors) to explore options for reducing and diverting food waste	M
		3.2.11. Explore the feasibility of food waste diversion options for businesses, including a collection service (provided by council or by private collectors) and shared organics compound	L
		3.2.12. Promote other outlets for the recovery of materials not provided by Council waste and recycling services	L
3.3.	Review waste and resource recovery infrastructure and	3.3.1. Review the distribution and collection frequency of public place bins and upgrade infrastructure to meet demand as needed	L
	services to minimise waste generated in public spaces	3.3.2. Conduct public place bin audits to inform the expansion of the public place recycling infrastructure network as required	L
		3.3.3. Continue to trial solar powered compactor bins and investigate other options to service high use public place waste bins	M
		3.3.4. Assess the outcomes from the solar powered compactor bin trial to determine the feasibility of rolling out bins at a wider scale	М
		3.3.5. Review current clean-up and enforcement measures to better manage illegal dumping (e.g. increased monitoring systems, targeted actions and education tools)	М
		3.3.6. Ensure appropriate bin infrastructure is available at farmers' markets and other local events to minimise waste and increase recycling	Н
3.4.	Explore innovative systems to	3.4.1. Investigate RFID tags as part of future bin replacement programs	L
	improve waste and recycling services and the robustness	3.4.2. Investigate improved monitoring and data collection systems such as alternative video monitoring systems for collection and fault systems	L
	of data management	3.4.3. Continue to monitor and seek continual improvement of waste management services and data recording where possible	L
3.5.	Review the RRC/TS network to ensure usage and	3.5.1. Establish a benchmark policy for the coverage of residents by travel time to a waste/recycling facility	L

			SHIKE
	Strategy	Action	Priority
	accessibility meets future community needs	<ul><li>3.5.2. Assess the RRC/TS network in the Shire with the view to rationalise facilities and improve service standards</li><li>3.5.3. Work with Barwon South West WRRG and Sustainability Victoria to expand material recovery opportunities to the Corangamite community (including 'Detox your Home').</li></ul>	L M
3.6	. Upgrade waste facilities as	3.6.1. Implement recommended actions from the 2018 landfill financial modelling study	Н
	needed to improve operating	3.6.2. Invest in landfill gas management at Corangamite Regional Landfill	M
	efficiency and ensure	3.6.3. Upgrade the landfill invoicing and weighbridge IT systems to better meet the needs of users and Council	L
	facilities are in accordance	3.6.4. Develop improved composting systems (e.g. in-vessel) and attract new customers	Н
	with best practice standards and regulations	3.6.5. Ensure Council's closed landfills are assessed and managed to meet regulatory requirements to minimise risk of potential harm to the community and environment	М
		3.6.6. Work with environmental auditors to obtain approval to stop monitoring requirements for Noorat closed landfill	L

Priority of actions: low priority (L), medium priority (M) and high priority (H)
